

**ALWAYS ASK
IF IT'S AN
OPIOID.**

OPIOIDS CAN TAKE AWAY MORE THAN PAIN.

While prescription opioids affect everyone differently, there are common side effects with this type of medication. These side effects can impact your body and how you feel, your safety at home, on the roads, at work and in the community.

If you are experiencing any side effects, or are concerned about the medication you are taking, talk to your health care team.
